DETAILED ACTION

Election/Restriction

1. Applicant's election without traverse of Group V in Paper No. 8 is acknowledged.

Double Patenting

2. The non-statutory double patenting rejection, whether of the obviousness-type or non-obviousness-type, is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent. *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); and *In re Goodman*, 29 USPQ2d 2010 (Fed. Cir. 1993).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(b) and © may be used to overcome an actual or provisional rejection based on a non-statutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.78(d).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 43 and 44 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of U.S. Patent No. 6,250,283. Although the conflicting claims are not identical, they are not patentably distinct from each other because all the limitation of the claims 43 and 44 are contained in the claims 1-9 (of U.S. Pat. 6,250,283) with the exception of the calculation of the desired cylinder charge nor the determination of the desired engine output speed based on a desired engine speed and an actual engine speed. Claims

Art Unit: 3747

1-9 (of U.S. Pat.6,250,283) require an engine speed to control the inlet control device based upon the engine speed. Claims 43 and 44 of this application recite the same engine control device without requiring the calculation of the desired cylinder charge nor the determination of the desired engine output speed based on a desired engine speed and an actual engine speed. Therefore, it would have been obvious to one having ordinary skill in the art to calculate the desired cylinder charge or the determination of the desired engine output speed based on a desired engine speed and an actual engine speed as an engineering expedient.
